

Hardingstone Parish Council Trees General Policy

This policy defines the Council's approach to tree management on its land. It is intended to be a point of reference for the Public, Councillors and Officers to ensure a consistent and structured approach to the management of the Council's trees. This policy sets out a proactive and systematic method of management that will both conserve and enhance our tree population and the amenity value of our land. For sites of special character, or that have trees of particular significance, this general policy will be supplemented with West Northamptonshire Councils Tree Preservation Orders (TPOs); a copy of which is available in the Parish Room.

Tree Protection

Due care will be taken by the Council to ensure that damage to trees by mowing and or strimming is prevented. Longer grass/shrub margins around trees may be left. Protection will be provided for newly planted or young trees where appropriate, e.g. strimmer guards.

Tree Inspections

The Council has a duty of care for its trees and all users of Parish Land and will arrange inspections of trees in high risk areas by a recognised tree surgeon as necessary. High risk areas will include such areas as adjacent to the public highway; public footpaths and other areas of high use such as the Council's play areas.

The Council will also consider requests to conduct tree work on the Council's land from members of the public. If the request concerns a potentially dangerous tree, the tree will be inspected on the same or next day. If the request is of a non-urgent nature, an inspection will be undertaken within 30 days. In all cases, the member of the public concerned will be informed of this inspection policy and will be informed of any action to be taken resulting from the inspection.

The Council recognises the importance of mature and ancient trees and will balance safety with a duty to protect the environment/public. Higher levels of risk will be acceptable in areas of lower footfall (e.g. the middle of a woodland site) as opposed to highly visited areas (e.g. play areas). This will allow the Council to keep veteran trees to encourage biodiversity without creating undue risk.

Trees General Policy

Trees on the Recreation ground and land by the Parish Office were surveyed by MPL Tree Consultancy in July 2019.

His advice is that trees are surveyed again within 3 years. Trees to be inspected before July 2022

Tree Felling

The Council will avoid felling trees unless it is necessary. This will usually be for health and safety purposes, or to prevent the spread of serious tree diseases and pests. However, the Council reserve the right to fell trees to prevent overcrowding, to improve habitats or where a tree is inappropriate to its location and has a significantly detrimental impact on the appearance or amenity of a site.

Hedges

Hedges are an attractive feature on our land and provide an important habitat for a wide range of species, offering food, shelter, protection from predators, wintering and nesting sites, and act as transit corridors. It is recognised that trimming hedges too severely can have a detrimental impact on their wildlife value. Where there is no negative impact on health and safety (e.g. visibility for motorists), the Council aims to have taller, bushier hedges. However, the Council will ensure that hedge growth does not impair the safety of highway users nor impede their access. Unless for urgent health and safety reasons, hedge cutting will not be conducted between April and August (nesting season)

Maintenance

Tree work will be prioritised and carried out according to identified hazard and risk. After investigation and inspection, the Council will produce a programme of works within the available budgets. The emphasis will be on planned, rather than reactive, tree maintenance.

The following categories will be used to categorise our tree works:

Emergency: Dangerous trees requiring immediate attention

Timescale for works: Same day or next day wherever possible

Category One: Essential works to mitigate hazard

Target timescale for works: Within 12 weeks of identification

Category Two: Desirable works

e.g. to improve tree health, loosening/removing tree ties as the trees grow

Target timescale for works: Within 3 months of identification

Category Three: Non-essential works

Trees General Policy

e.g. thinning out, formative pruning

Target timescale for works: Within 12 months of identification

Tree maintenance will be conducted by trained Contractors subject to the nature of the work. All tree works will be conducted to comply with Tree Works - Recommendations.

Tree pruning will be carried out when deemed necessary following an assessment.

Pruning will be carried out:

- for health and safety reasons e.g. to remove some of the lower branches of a tree located near a road to enable traffic to pass safely or located near a residents property
- where it is in-line with site-specific management plans

There may be times when the tree maintenance the Council conducts does not meet the expectations of members of the public requesting works. In this situation, members of the public are advised to follow our Complaints Policy and Procedure.

When the Council will not undertake tree pruning or removal maintenance:

- in response to natural occurrences that do not pose a health and safety risk, such as falling nuts, bird droppings, falling leaves, or sap exudation
- where trees have a negative impact on television reception, where the canopy is blocking lighting, with the exception of street lighting
- where the tree is blocking views from a residence
- during the nesting season (March to August), unless the work is for urgent health and safety reasons. It is an offence to intentionally damage or destroy the nest of any wild bird while it is in use or being built; therefore tree works will avoid this
- if a tree contains roosting bats (it is a criminal offence to recklessly or intentionally disturb bats, or to damage or destroy a roost). If work is required for health and safety reasons, the advice of English Nature will be sought
- trees overhanging an adjacent property unless it poses a health and safety risk
- removal of dead branches (conduct crown cleaning) from trees located in relatively quiet locations due to their ecological value. However, if the dead or diseased branches pose a health and safety risk, or are felt to be impacting upon the tree's health, crown cleaning will be conducted.

Additional information about Tree Preservation Orders (TPOs)

Trees General Policy

A Tree Preservation Order is an order made to protect certain important trees, tree groups or woodlands because of their intrinsic beauty, the special contribution they make to the landscape or street scene, or because of their benefit to the appearance or screening of a new development.

Trees covered by preservation orders have special protection by law. It is an offence to cut down, uproot, prune (roots as well as branches), damage or destroy any protected tree without the permission of West Northamptonshire Council.

If you do, you could be prosecuted and fined. If a tree has been removed or destroyed, you may also be required to plant replacements.

To check whether a tree is protected, contact the Council's Arboricultural Officer.

Applying for Tree Preservation Order Consent

If you are considering undertaking tree work to a protected tree it is recommended that you first arrange to have the tree inspected by a qualified tree surgeon or arborist who will be able to advise you as to if and what works are appropriate and necessary.

If tree works are required to a protected tree, please contact West Northamptonshire Council's Arboricultural Officer (by post, email or through the planning portal)

The Parish Council holds a list of all TPOs within the village.
